

HOW TO - Webcontrol Rotary Encoder

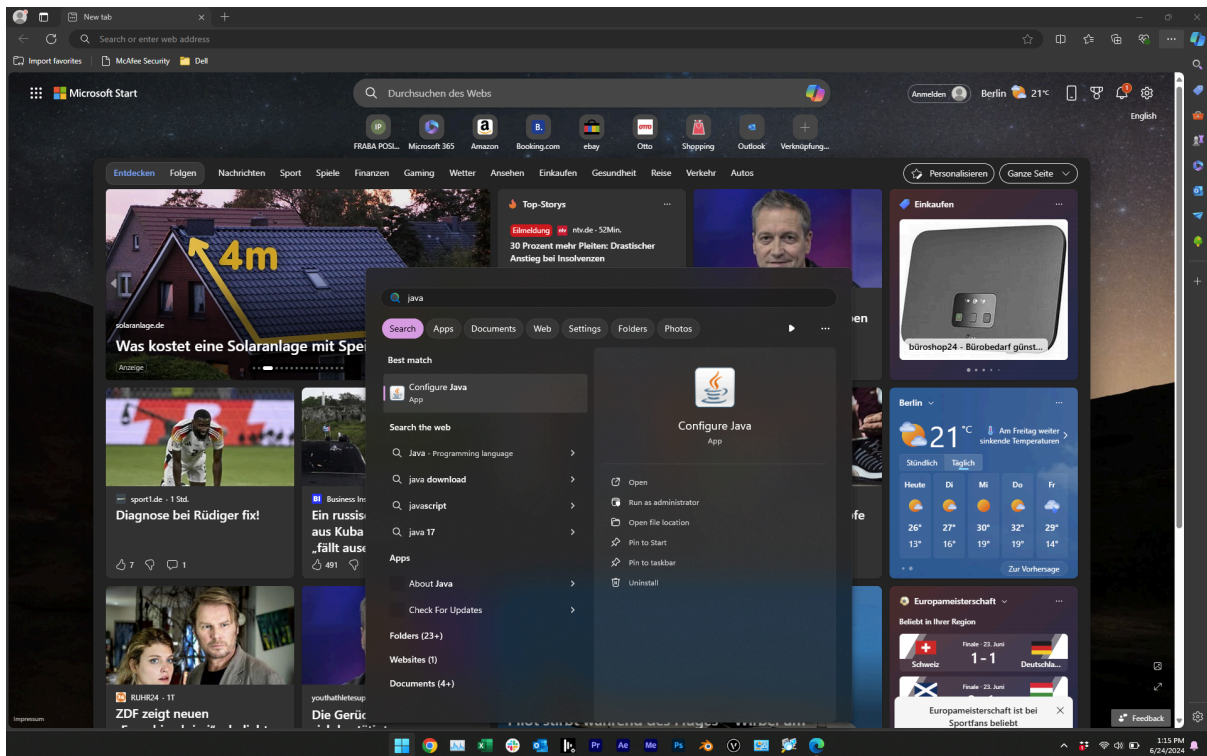

1 - Allow sites to be reloaded with Internet Explorer Extension (in Microsoft Edge)

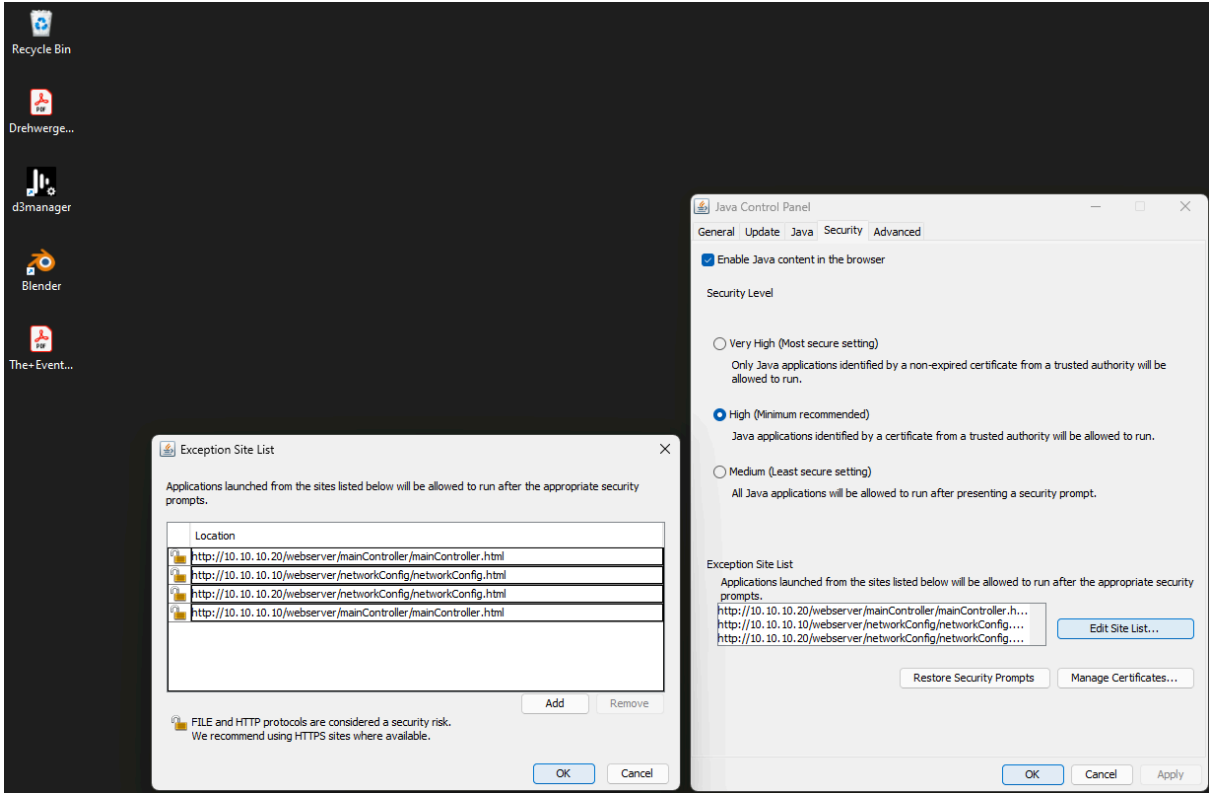

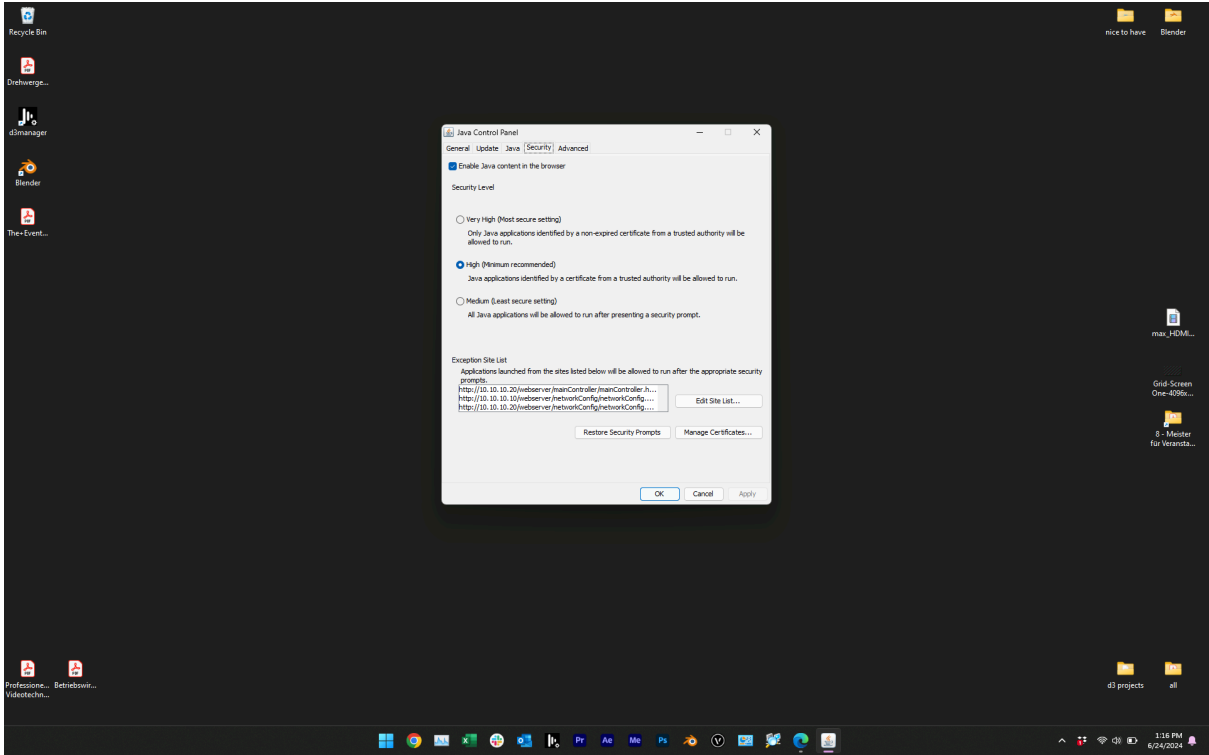

2 - Go to the main webcontrol site

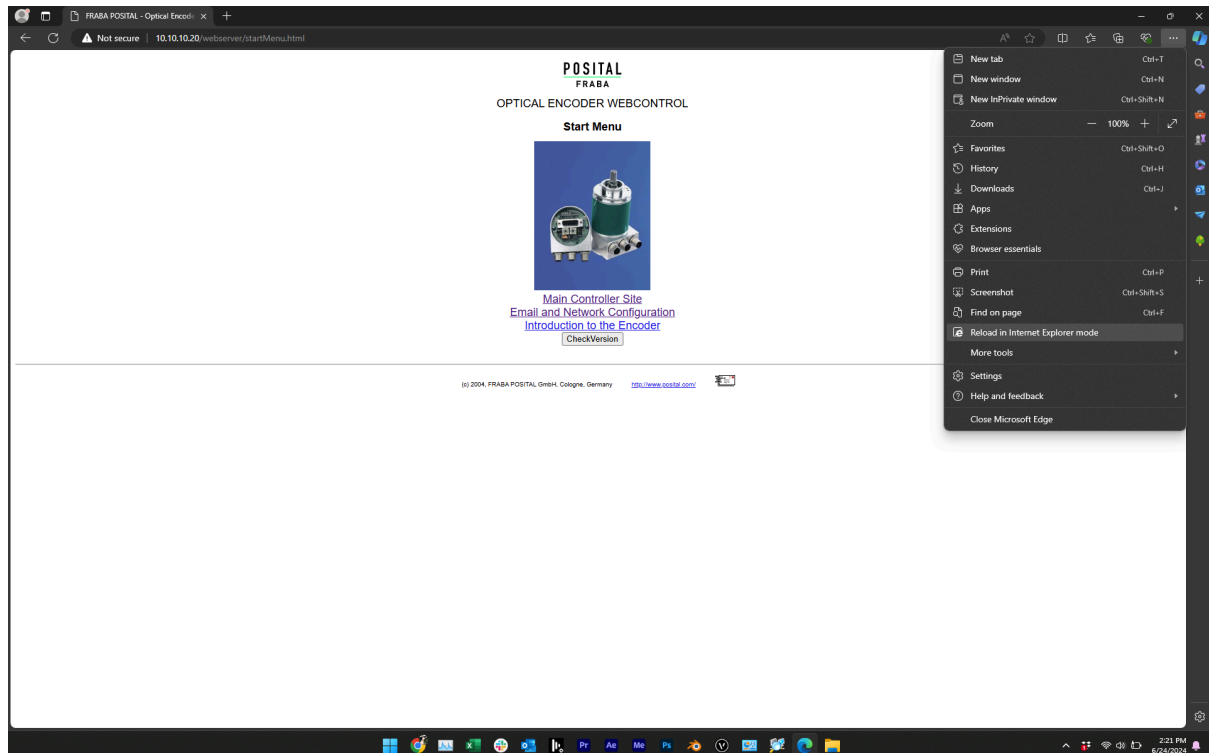

3 - allow both site-urls ("Main Controller Site" and "Email and Network Configuration" in Java

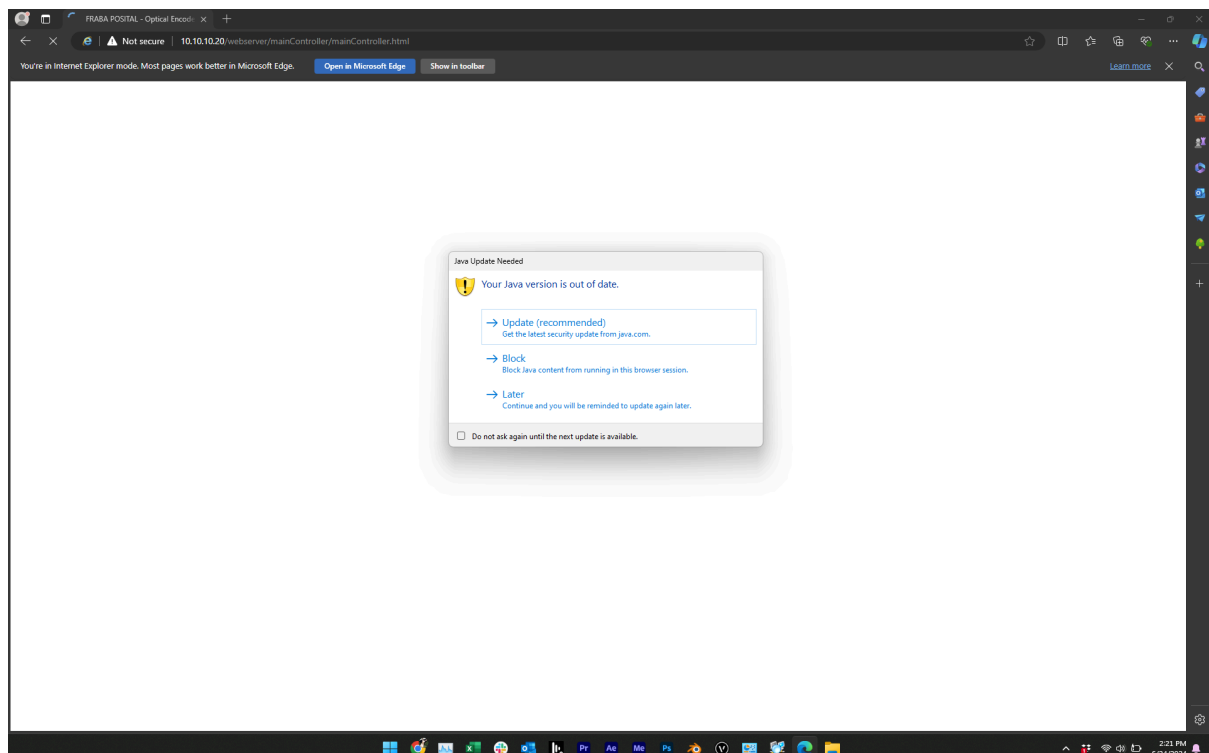

4 - see screenshot below

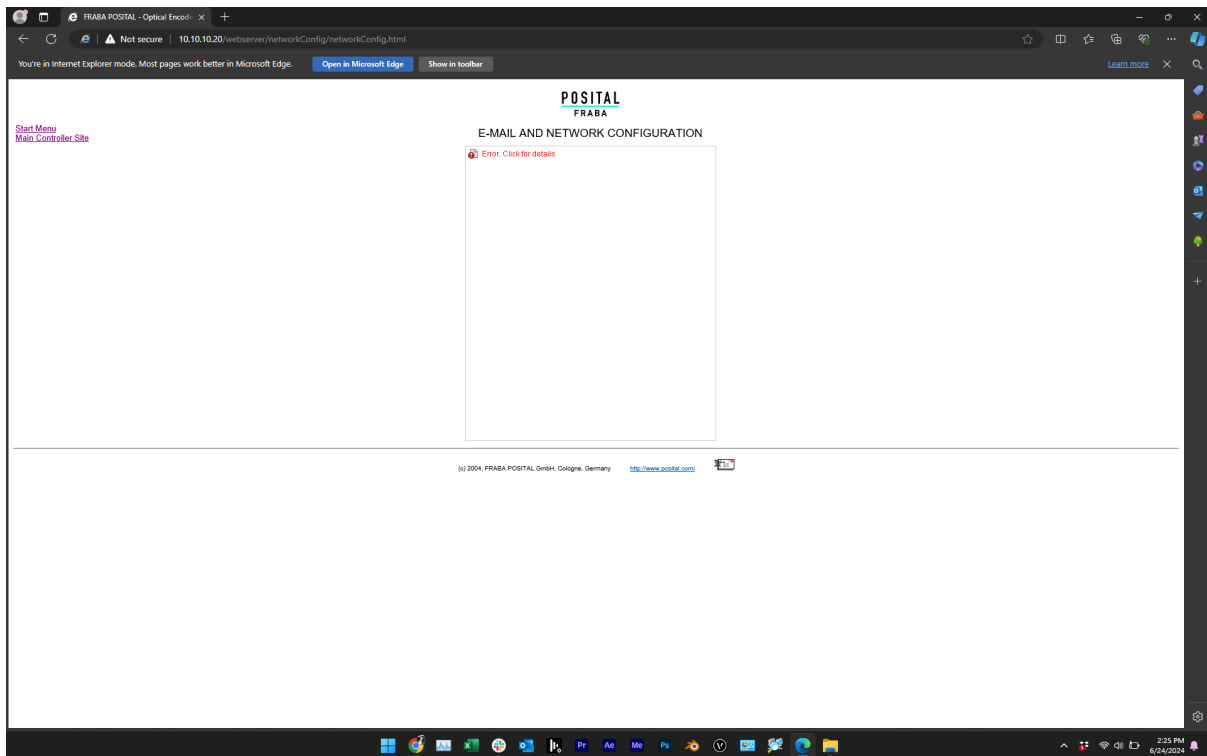

5 - now we reload the site in Internet Explorer

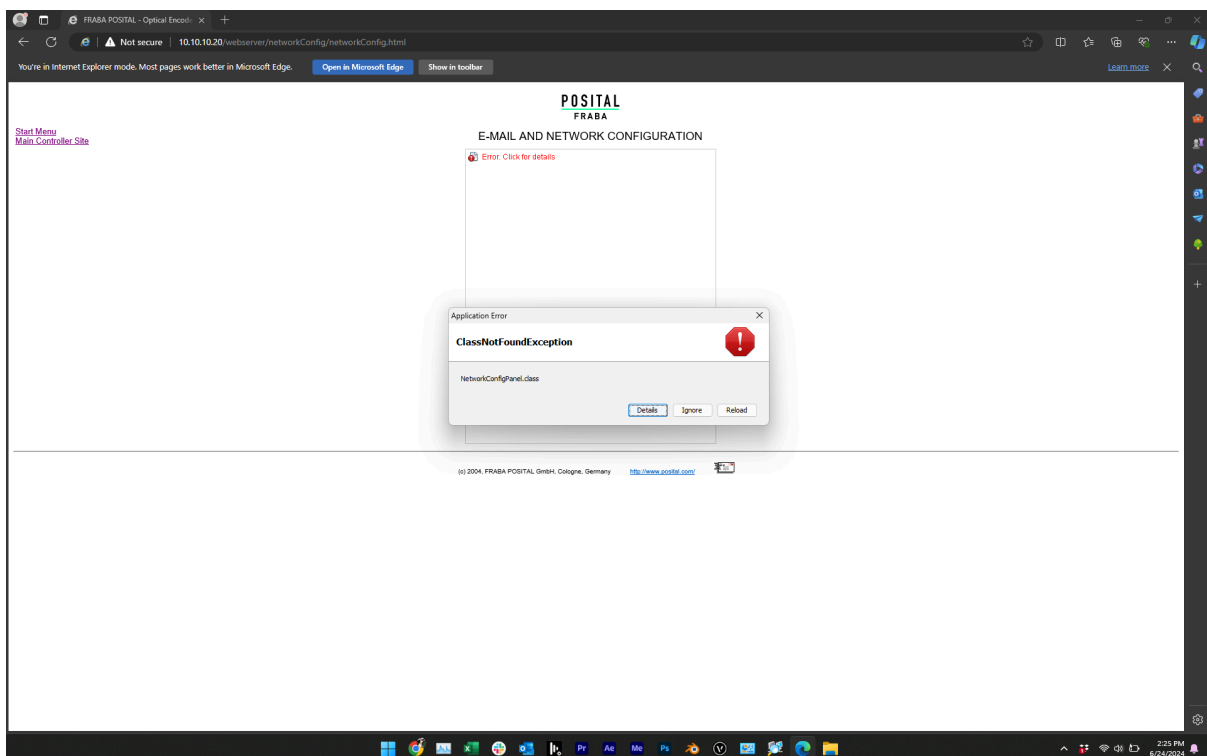

6 - click on "Later"

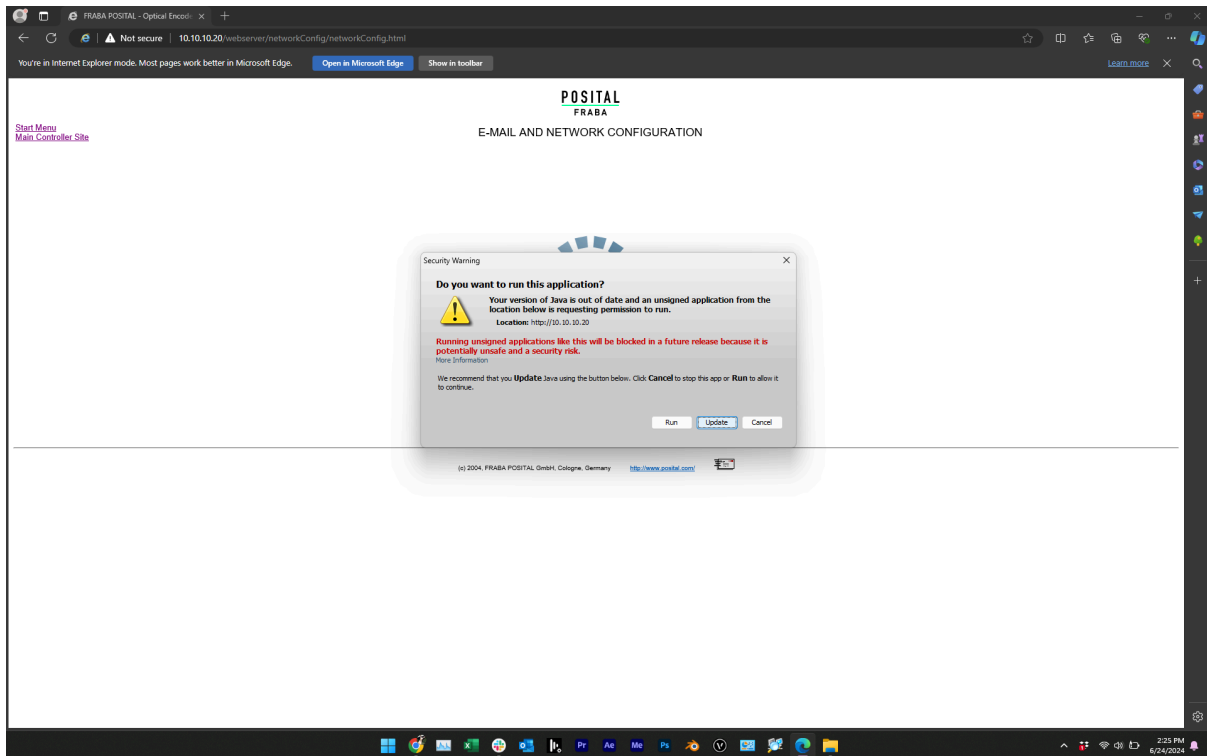

7 - Then you'll have to wait until the loading Java sign vanishes and we get an error message

8 - Click on the link with the error and click on “reload”

9 - click "Run" to finally run the controller web site

10 - done
